

Abstract

Packages made from multilayer structures useful for packaging bone-in meat or other like products are provided. More specifically, packages made from multilayer structures are provided wherein the multilayer structures have sufficient rigidity and strength to contain bone-in meat or other like products. In addition, packages made from multilayer structures are provided for packaging bone-in meat and other like products wherein the multilayer structures can easily seal to themselves or to other structures to provide the packages for the products. Moreover, the multilayer structures of the present invention may be biaxially oriented and heat-shrinkable.
